Augmentative Communication Services Roadmap

**Please Note: Your child may not access every stage on the roadmap.

1 PARENT ONLY APPOINTMENT

Clinicians explain the process, answer questions and gather information about your child to help plan the assessment.

2 OBSERVATION VISIT

Clinicians observe your child in a natural environment and confirm whether your child is ready to go to Step 3. If your child is not yet ready for further assessment, you will be provided with recommendations and discharged.

3 ASSESSMENT

Bring your child to KidsInclusive where clinicians will try different communication systems and assess which system meets their needs. An assessment does not guarantee that your child will move onto step 4 or require an ADP funded system. During the assessment, the clinician will determine eligibility for funding assistance to help fund the recommended communication system.

4 PICK UP EQUIPMENT

Clinicians explain next steps to get your communication system, and how to access ACS in the future.
